WEB DEVELOPMENT ACTIVITY BASED LEARNING

2.DIGITAL LIBRARY

1. Problem Statement

Traditional library systems often require manual searching and record management, which can be time-consuming and inconvenient for users. A Digital Library Management Website provides an organized online platform to browse books, view author details, check book availability, and search for books easily.

2. Objectives

- To develop a user-friendly digital library website using HTML and CSS.
- To display books with their titles, covers, authors, and categories.
- To provide a search and filter interface for finding books easily.
- To display book availability and library rules.
- To improve accessibility and organization of library information.

3. Key Features

- **Home Page:** Introduces the digital library and its services.
- **Book Categories**: Organizes books into categories such as science, technology, fiction, and education.
- **Book Catalog:** Displays book covers, titles, and author details.
- **Search and Filter:** Helps users find books based on titles, authors, or categories.
- **Availability Status:** Shows whether books are available or unavailable.
- **Library Rules:** Provides information about borrowing policies and library guidelines.
- **Responsive Design:** Supports different screen sizes and devices.
- **Navigation Menu:** Allows easy movement between website sections.

4. Applications

- **Educational Institutions:** Helps students explore academic books and learning resources.
- **School Libraries:** Organizes and displays information about school library collections.
- **College Libraries:** Helps students and faculty discover books related to their subjects.

- **Public Libraries:** Provides visitors with an online catalog of available books.
- **Digital Learning:** Supports self-learning and access to educational information.
- **Book Discovery:** Helps readers explore books by category, author, or title.
